

Clima-16 - Climate computer

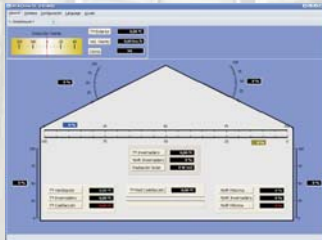

Simply and Reliable Control

New compact climate controller from INTA *Clima16* is designed to control climate conditions from 1 up to 4 compartments. Depending from the version, we can control:

- 2 Heating systems by hot water
- Ventilation (2 x top and 2 x side ventilation)
- Screens (thermic and shade)
- Fogging
- Fans / heating by hot air
- Inflation

Clima16 is designed to be very easy to install and to operate. We have spend many hours for analysing the needs of growers. And now, in our controller you can find an effect of this long-term cooperation "producer-grower". Our controller is based completely on modern technology, and our electronic boards are prepared to work for many years in hard conditions, which you can find inside the greenhouses.

PC software

As a part of the controller we offer a PC software that is giving you the opportunity to register all essential parameters from the greenhouse. It is very useful tool, that helps you to analyze the situation in the greenhouse 24 hours per day.

Menu BASIC or ADVANCED

In every controller you can choose if you would like to use menu which shows only the most essential parameters of the control, or menu that is giving you the total control over the greenhouse.

Compact weather station

Together with the controller we offer our weather station ETM-16 which is measuring following parameters: wind speed and direction, rain and temperature (optional).

Further Information

For more information about the CDC or Clima16, please contact our sale advisor or a INTA dealer near you. You can also visit our website: www.inta.com.es .
